

Between-form contrasts and within-form heterogeneity

Middle pulse SD=0.15; storage allocation f=0.5. Mapped storage length is not a measured hydraulic residence time.

a/b/f: HUC4-block bootstrap 95%; c-e: deterministic scenario responses, c lines are medians. No outcome-based rematching. Negative reductions indicate peak increases. Identical forcing and conserved integrated anomaly; response changes are not chemical DOC removal.
