

How are junctions and paths organized within the three river outlines?

Elongated / tributary-rich Mainstem / sparse Broad / tributary-rich

a Outlines and internal organization

b Structural combinations within each outline

322 distinct real networks; geometry-only cuts at median junction balance 0.151 and path CV 0.440.
More/less and concentrated/dispersed are relative to this cohort. Two junction-free networks are separate. b: percentages within each outline.
