

Four internal structural profiles in actual mapped river networks

1 Less balanced
Concentrated paths
67 networks

Station 03339000 · outline 3
Balance 0.140 · path CV 0.401
Area 3,340 km² · 1,057 reaches

2 Less balanced
Dispersed paths
92 networks

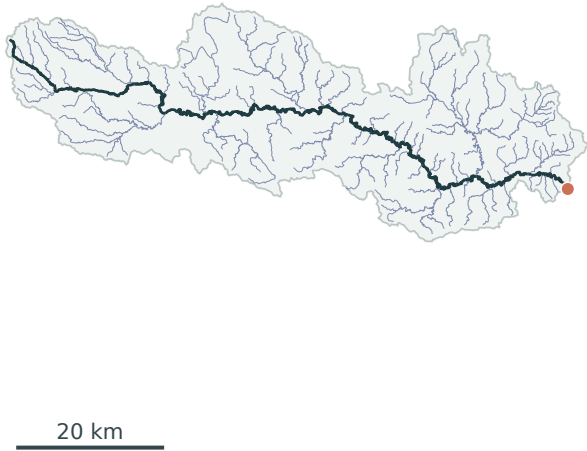

Station 03030852 · outline 1
Balance 0.128 · path CV 0.497
Area 3,004 km² · 1,655 reaches

3 More balanced
Concentrated paths
93 networks

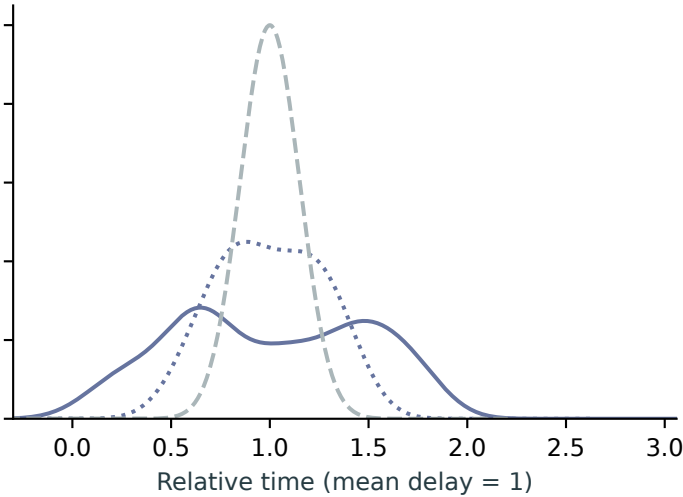

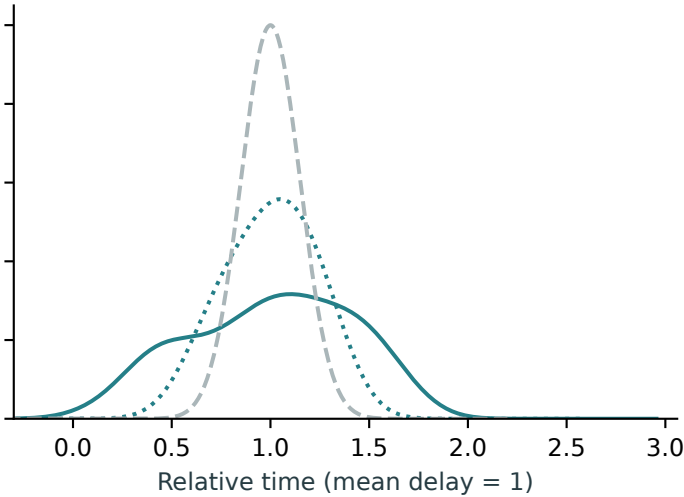

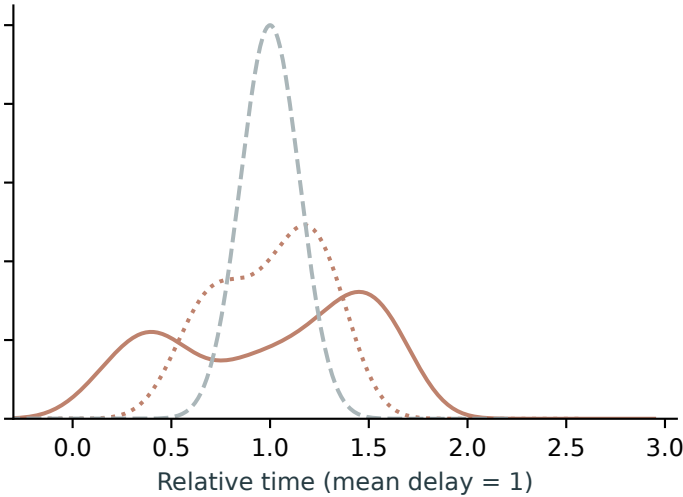

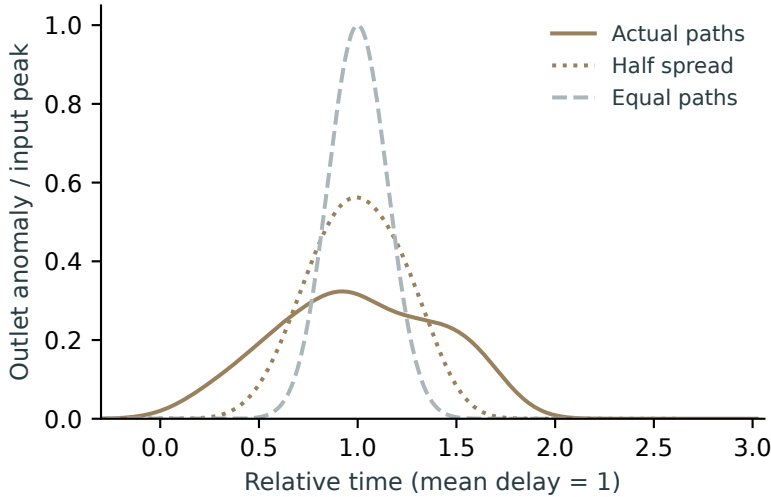

Station 03474000 · outline 1
Balance 0.184 · path CV 0.407
Area 340 km² · 164 reaches

4 More balanced
Dispersed paths
68 networks

Station 06340000 · outline 1
Balance 0.157 · path CV 0.484
Area 1,436 km² · 296 reaches

Top: geometry-only real medoids; dark mainstem, orange outlet, independent physical scale bars. Bottom: identical input with mean path delay fixed. Only path spread changes; no reduced input DOC or channel removal. Relative scenario time is not measured days or velocity.
