

Wider source experience for unmonitored DOC reconstruction

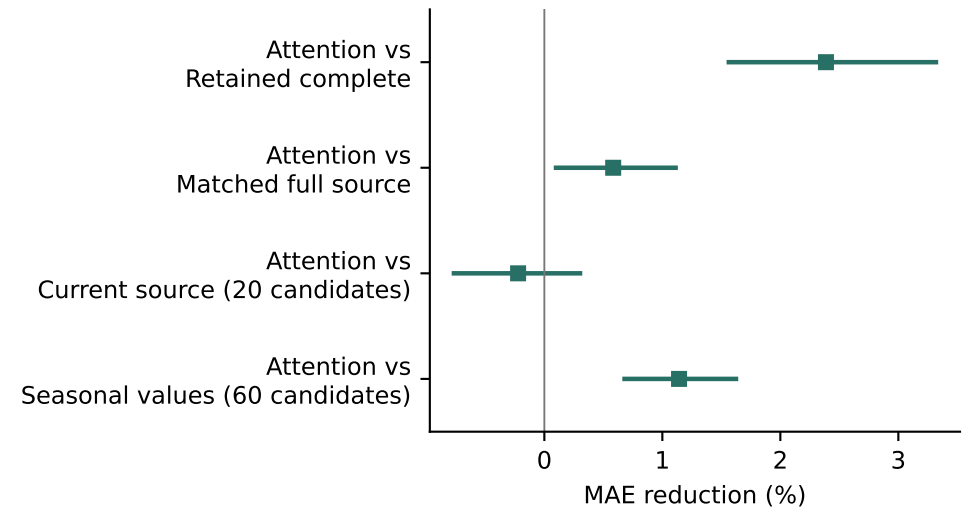

a

All-observation K0 reconstruction

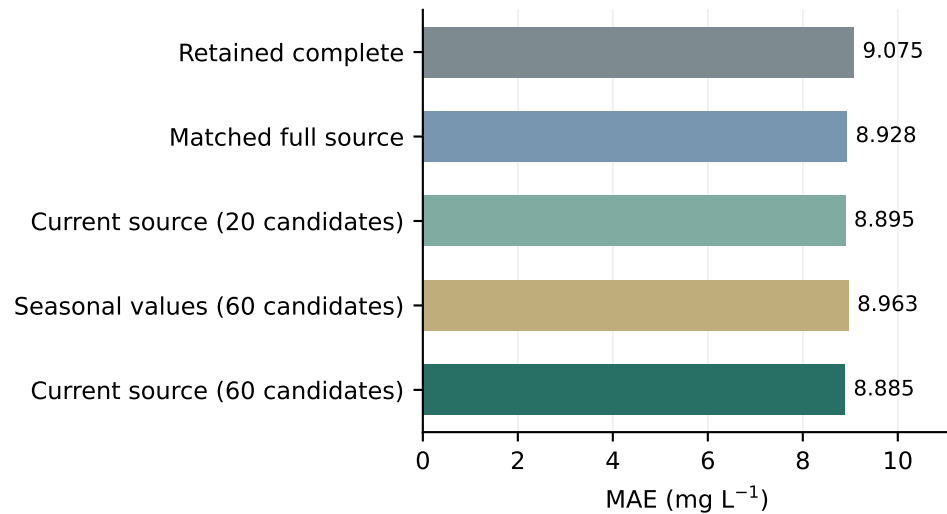

b

Paired station intervals (95%)

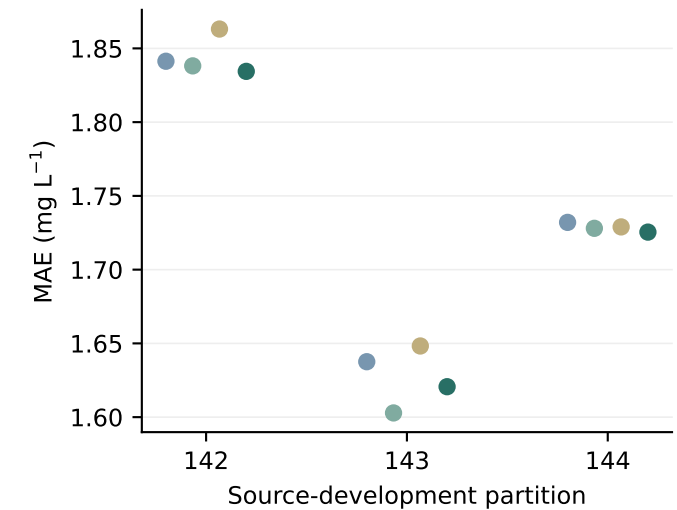

c

High-DOC reconstruction

d

Matched source partitions

● Matched full source
 ● Seasonal values (60 candidates)
 ● Current source (60 candidates)
 ● Current source (20 candidates)

3 source partitions × 3 seeds · Same reference/backbone · 20 versus 60 ecological source candidates
 Receiving water quality absent · 5,000 station draws · Geographical and external products unchanged
