

Which river information is supported by observed DOC?

Identical evaluation months and shared background; each monitored system held out, delay selected only in the other systems.

59 tributary pairs / 22 receivers / 11 monitored systems; 3,026 pair-months represent 1,092 unique receiver-month truths.
Receiver-equal points; paired-system bootstrap 95% (a: single-operator intervals). Upstream DOC is known; this is not unmonitored K0.
