

Structural portraits of three real river forms

— Mapped LakePond / Reservoir reaches — Mainstem

a Elongated / tributary-rich
03030852

Whole-network path CV 0.497
Major shared path 76.6%
Whole-network storage path share 0.6%
Selected-path storage Independent paths only

b Mainstem dominated / sparse
06893990

Whole-network path CV 0.439
Major shared path 71.0%
Whole-network storage path share 0.0%
Selected-path storage None on selected paths

c Broad / tributary-rich
07099200

Whole-network path CV 0.530
Major shared path 21.5%
Whole-network storage path share 0.5%
Selected-path storage Independent paths only

Original geometry-selected examples retained; independent physical map extents. Path shares are channel-length measures, not measured residence times.
