

Real river corridors, sparse DOC event observations

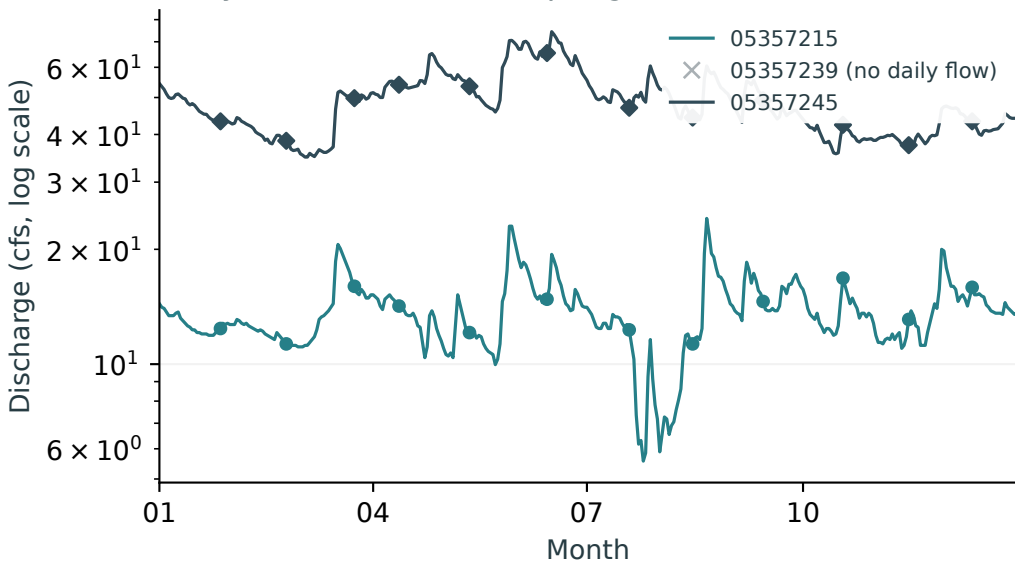

Storage-rich shared trunk

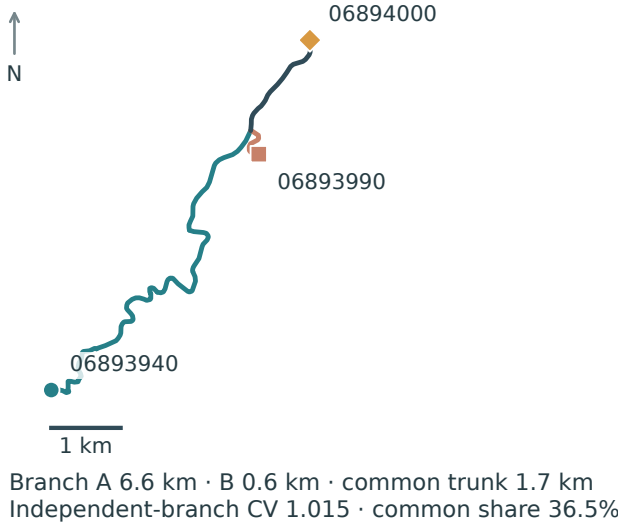

2016 Actual DOC sampling

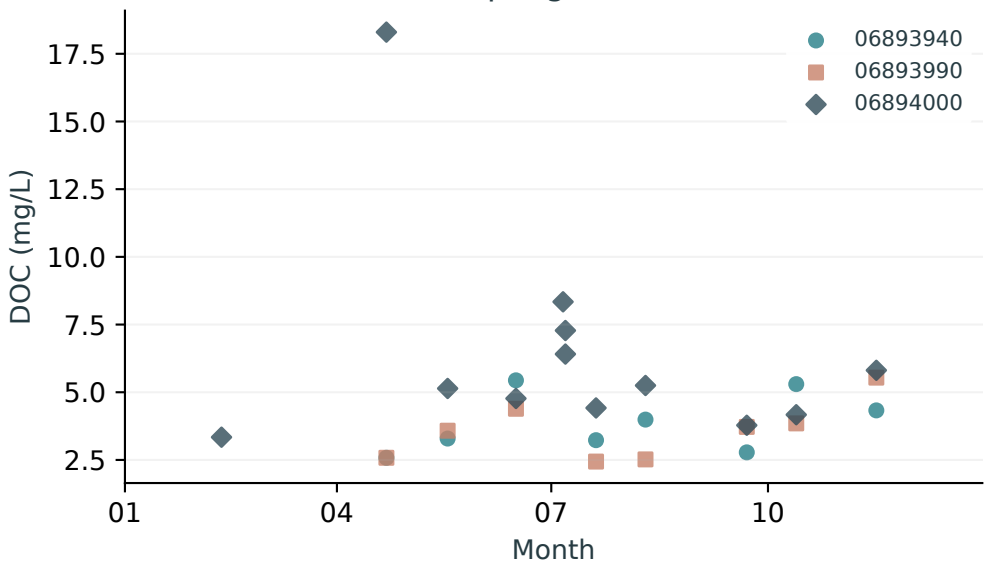

Daily flow and DOC sampling dates

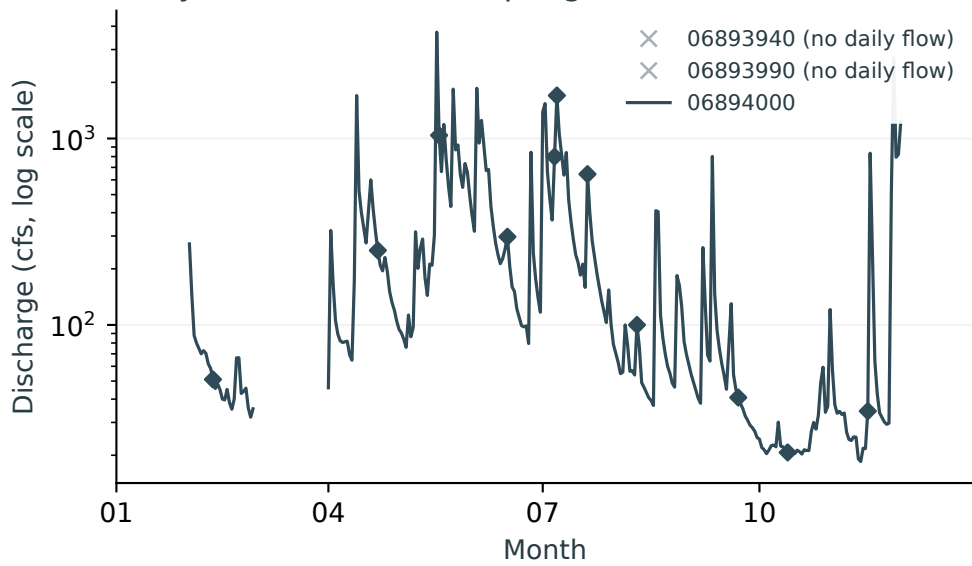

No mapped shared-trunk storage

2015 Actual DOC sampling

Daily flow and DOC sampling dates

Examples selected by geometry and sampling coverage, not DOC response. DOC points are observations; flow lines retain gaps. Actual NHDPlus routes, separate scales. Mapped storage is a reach attribute, not a measured residence time. None of the five storage connections has ≥ 3 sample days per station in a common month.
