

Paired flow and optical-DOC responses

The earliest three ≥ 24 -h segments, selected chronologically rather than by DOC outcome.

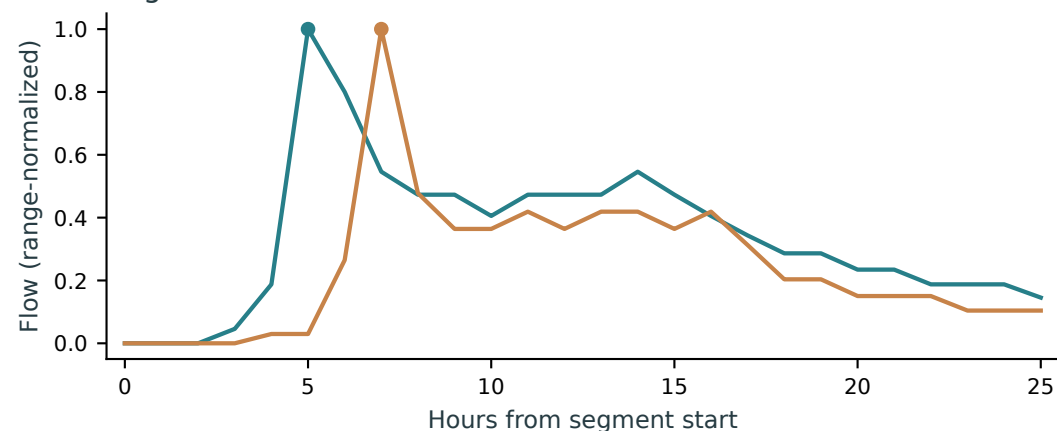

Segment #3 · 2019-11-05 · 51 h

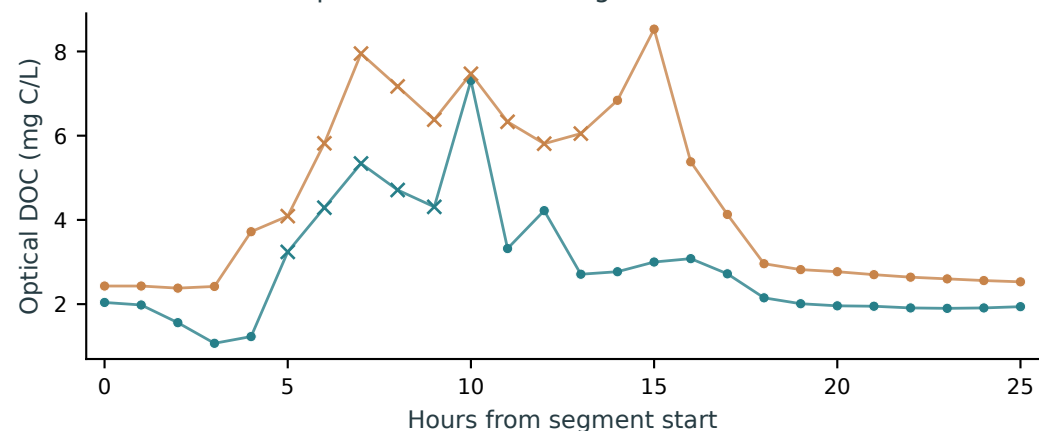

Dots: corrected optical; x: retrieval regime

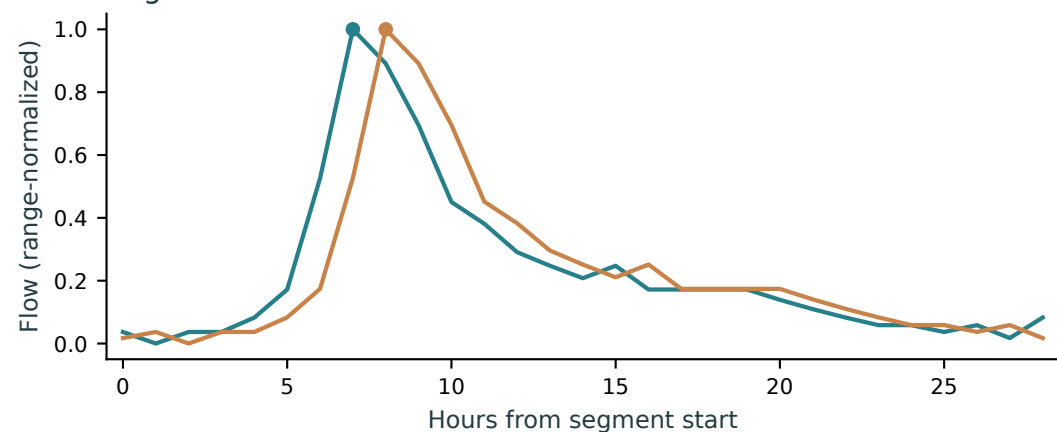

Segment #4 · 2019-11-13 · 25 h

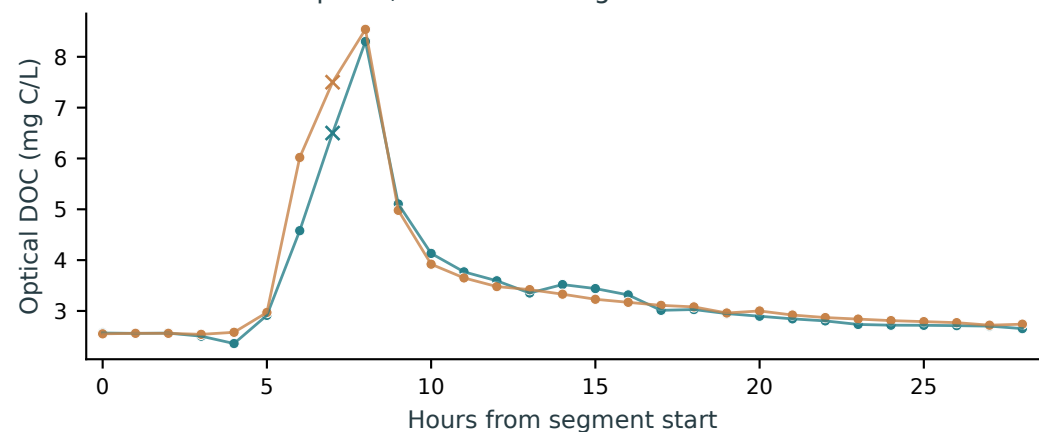

Dots: corrected optical; x: retrieval regime

Segment #5 · 2021-01-17 · 28 h

Dots: corrected optical; x: retrieval regime

Flow is normalized by each site-segment minimum and range to compare shape. DOC retains mg C/L; x is not an independent optical peak. Source-clock timezone is unspecified; an observation segment can contain several waves.
