

Continuous river structure and adjusted DOC concentration

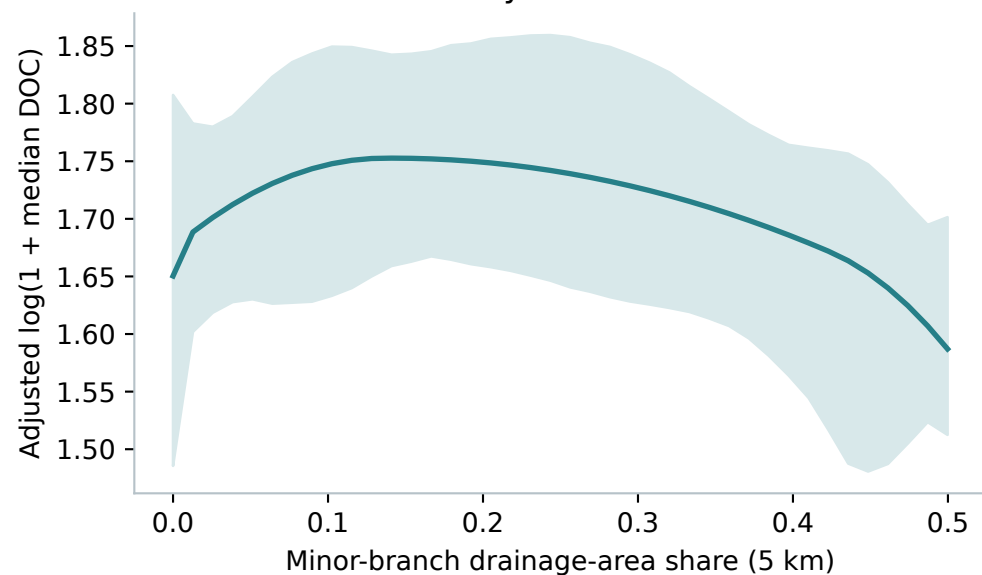

River order

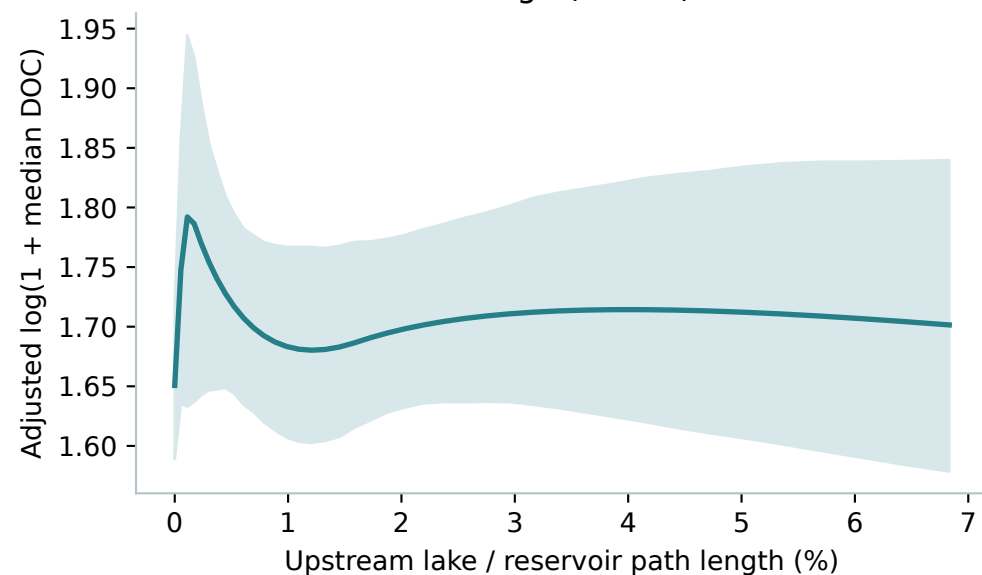

Junctions / length (20 km)

Tributary area balance

Storage (20 km)

Additive quadratic splines, five quantile knots; remaining structure and environmental covariates included.
Curves span source-station 10th-90th percentiles. Other design columns held at their observed mean; bands: pointwise station-bootstrap 95% intervals.
Conditional associations describe the fitted model; they are not physical interventions or transport coefficients.
