

river planform classes from real upstream networks

Elongated, tributary-rich
Type 1 · n = 111
Station 03030852

Basin aspect 2.15 · Mainstem share 7.0%
3,004 km² · 1,655 mapped reaches

Mainstem-dominated, sparse
Type 2 · n = 33
Station 06893564

Basin aspect 1.76 · Mainstem share 54.6%
78 km² · 11 mapped reaches

Broad, tributary-rich
Type 3 · n = 178
Station 07099200

Basin aspect 1.65 · Mainstem share 3.3%
10,904 km² · 2,980 mapped reaches

NHDPlus / USGS NLDI. Complete geometry for 353/357 stations; 322 unique networks classified.
Actual centroid-nearest networks; native projected orientation; panels have independent extents and physical scale bars.
Dark line: mainstem; colored lines: all connected tributaries; orange point: receiving reach outlet. No DOC used in clustering.
